

ONE-PAGE REPO SUMMARY

JoePine.com

Static real-estate web app for Rhode Island and Massachusetts buyers and sellers, summarized only from repo evidence.

App type: Static multi-page web app/site

Primary surface: Client-facing real-estate guidance and tools

Repo snapshot date: 2026-04-17

WHAT IT IS

JoePine.com is a branded, client-facing real-estate website for Joe Pine covering Rhode Island and Massachusetts. It combines educational guides, calculators, search/listing experiences, and process explainers so clients can understand the numbers and the next step.

WHO IT'S FOR

Primary persona: Rhode Island and Massachusetts home buyers and sellers, especially first-time buyers who want plain-language education, planning tools, and direct access to Joe Pine.

WHAT IT DOES

- Publishes a 28-slide first-time buyer workbook covering credit, cash to close, assistance, contingencies, and offer-to-closing steps.
- Provides a buyer hub with the journey tracker, monthly payment calculator, lender list, inspector list, and attorney options.
- Provides a seller hub with the seller journey, seller proceeds calculator, and closing-attorney options.
- Wraps Keller Williams home search with a quick payment-based budget estimator and full-search links.
- Renders featured listings from repo-managed listing data, including photos, status notes, open-house info, and tour links.
- Exports branded calculator worksheets/PDFs; the seller proceeds tool also remembers inputs locally.

HOW IT WORKS

- **Front end:** static HTML/CSS/JS pages under folders such as `buyers/`, `sellers/`, `journey/`, `Monthly Payment/`, `Seller Net/`, `search/`, and `listings/`, with shared chrome in `site-frame.css` and `site-frame.js`.
- **Composition:** buyer and seller hubs embed sub-pages in `iframe`s and resize them with `postMessage`; `redirect/file-preview` helpers support local `file:` viewing.
- **Client-side data:** content and state live in browser scripts such as `script.js`, `journey.js`, `listings-data.js`, and calculator code inside page HTML; seller proceeds persistence uses cookies plus `localStorage`.
- **External services:** Leaflet plus CARTO/OpenStreetMap tiles, Keller Williams search embeds, Mortgage News Daily rates via CodeTabs proxy, and Firebase Auth/Firestore in `Monthly Payment/index.html` for anonymous auth and lead capture.
- **Repo-owned backend/build system:** Not found in repo.

HOW TO RUN

- **Install/build/start command:** Not found in repo.
- Open `index.html` in a browser for the minimal local preview; route wrappers and `site-frame.js` include explicit `file:` handling.
- Optional inference from repo structure: serve the folder as static files if you want cleaner route URLs and `iframe` behavior.

REPO GAPS

README usage details, deployment steps, automated tests, and package/dependency manifests were not found in repo.

Evidence: `index.html`, `script.js`, `buyer-start-here/index.html`, `buyers/index.html`, `sellers/index.html`, `journey/index.html`, `journey.js`, `Monthly Payment/index.html`, `Seller Net/index.html`, `search/index.html`, `listings/index.html`, `listings/listings-data.js`, `listings/listings-render.js`, `attorneys/index.html`, and `inspectors/index.html`.
